Ideation Phase

Define the Problem Statements

Date	02 November 2026	**Team ID**	Not provided
Project Name	Global Fuel Prices Dashboard	**Prepared by**	Anushka Dubey

Customer / User Problem Statement

The dashboard is designed for people who need to understand and compare fuel prices across countries and over time. The project turns raw, dispersed price records into a single visual view that makes patterns and differences easier to identify.

Problem Statement	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	A student, researcher or analyst studying global fuel prices	Compare fuel prices across different countries and regions	The information may be spread across rows, countries and time periods and can be difficult to compare manually	There is no single interactive view that summarises the available dataset in a clear way	Confused and time-consuming when trying to identify meaningful differences
PS-2	A decision-maker or reader interested in fuel-price trends	Understand how fuel prices change over time and differ by fuel type	Raw tables do not quickly reveal trends, extremes or relationships	The data needs cleaning, aggregation and visual presentation before useful patterns become clear	Less confident about drawing quick, data-backed conclusions

Project Opportunity

Create a Tableau dashboard that combines country-level comparisons, time-based trends, fuel-type analysis and summary indicators. Interactive filters and tooltips should help users move from a global overview to the specific country, period or fuel category relevant to their question.
