IDEATION PHASE — EMPATHIZE & DISCOVER

EMPATHY MAP CANVAS | Global Fuel Prices and Taxation Trends (2020–2026)

Date	02 November 2026	**Team ID**	To be provided
Project Name	Global Fuel Prices and Taxation Trends	**Maximum Marks**	4 Marks

Empathy Map Canvas

An empathy map captures what a target user says, thinks, does and feels. It helps the project team understand the user's goals, questions and difficulties before deciding how the solution should work.

Persona: *A student or early-career analyst exploring global fuel prices for a class project, research assignment or introductory market analysis. This is a representative project persona, not a real individual.*

SAYS

- “I need to compare fuel prices across different countries.”
- “I want to understand how prices have changed over time.”
- “Can I see the differences between petrol, diesel and LPG?”

THINKS

- Which regions have the highest and lowest prices?
- How do taxes and subsidies relate to price differences?
- Are the data units and time periods consistent?
- Can I explain the results clearly?

DOES

- Searches for fuel-price information and datasets.
- Compares countries, regions and time periods.
- Uses filters to focus on a fuel type or year.
- Saves charts for reports and presentations.

FEELS

- Overwhelmed when information is scattered.
- Unsure when measures or units are unclear.
- Curious about regional differences and trends.
- More confident when data is organised and visualised clearly.

USER GOALS & PAIN POINTS

User Goals	Pain Points
• Understand broad global and regional fuel-price patterns. • Compare fuel categories and selected countries. • Explore tax and subsidy indicators. • Create evidence-based academic explanations.	• Data may be spread across files and sources. • Units, currencies, dates or definitions may differ. • Large tables can be difficult to interpret. • The user may confuse estimated values with verified market prices if limitations are not clear.

DESIGN OPPORTUNITIES

- Provide clear filters for year, region and fuel type.
- Use consistent chart labels, units, titles and legends.
- Present trend, country, regional, tax and subsidy views in a logical layout.
- Add a clear note explaining the dataset's estimated/simulated nature.
- Make it easy to export or present key dashboard views.

Empathy insight: The user does not simply need more numbers; they need comparable, understandable and clearly qualified information that helps them explore patterns without manually combining multiple tables.
